

Matronics dimmer 12V-24V with 24V control (Volvo)

LED dimmer-controller that amplifies 24V light-signal, where you cannot draw any power. Typically used for the interior light in Volvo trucks.

LED dimmer-controller that amplifies the original dimmer signal, where you cannot draw any extra power. These are typically used for the interior light in Volvo trucks, as it is very limited how much extra light can be connected, without the light system faulting.

Max current is 5A, if you need more, you can connect multiple controllers. There is 5A 2410 fuse inside the box.

The controller is simple to connect with the screw terminals. It is important that you use both GND and 24V on the controller, when the lights are connected. The controller must be as close as possible to the dimmer.

Connection:

- INPUT
 - DIM24V - Plus from Volvo dimmer connects here (24V)
 - IN- Connects to the minus from the truck (12V/24V)
 - IN+ Connects to ground from the truck
- OUTPUT
 - OUT+ Output with plus for the lights (12V/24V)
 - OUT- Output with minus for the lights
