

Matronics LED emitter for Double-burner lamps

Compact emitter for Doublers Burner lamps, available as Dual Color and single color. Replaces the original bulb holder. Easy to mount

Compact emitter for Doublers Burner lamps, available as Dual Color and single color. This also allows you to make combinations of colors and functions, eg. white positionlight in both sides, and also US indicator light in one side.

The emitters has a built in separator, to make the same "double burn" look as the original has, where the newer double burner with built in LEDs do not have the same retro look.

They are easy to mount, as the emitter replaces the original bulb holder, that is simply removed. The emitters are fastened through the original holes in the rubber base, the emitters are connected, and the glass is screwed on again. Only a M4 nut and M4x10 bolt is included for fastening the glass to the emitter.

Harness and wire

Due to the shape of the emitter, you should use 90 degree cablelugs, which we sell seperatly, or as a double wire harness, for connecting 2 emitters at the same time. You can use standard cable lugs, but these will be very visible.

Dual color change

The emitter changes color when you swap plus and minus. This can be done with a switch, or two-pole relay, or one of our dual color controllers.

The most simple is the [Colorchanger controller](#), that changes color on a signal..

We also have a [Dual Color US light controller](#), if you want to use the lamps as both position lights and indicators.

The last solution is a [Dual Color front and tail light controller](#), that has both high/low and blink-functions.
