

Volvo Bars lightbase - Dual Color

Lightbase for the diagonal lines, on the sides of the Volvo-logo. The original lines fits in to the base, where they are glued in place.

Lightbase for the diagonal lines, on the sides of the Volvo-logo. The original lines fits in to the base, where they are glued in place.

Be aware there are different sizes depend on model and year. Make sure your lines are 435mm or 375/388mm long , otherwise they will not fit this base.

The base is made of the same diffuse white plastic as the light base for the emblems.

The original lines are not included, but they are easily removed from the truck. The light base is glued in place on the truck, a good double adhesive tape could also be used.

Connecting

The built in dual color light can be connected in various ways. The wires match the color the light base has. The light base turns on the light based on which wire is connected to plus, while the other is connected to minus. This makes it possible to connect the base this way:

- [Color changer controller / Polarity flipper](#)
- [Dual color US-light controller](#)
- One single color without color-change
- Color change using relay or switch (must be dual pole switch DPDT)
