Adapter cable for positionlight in indicators for Scania 2016+

Simple adapter, so that you can use the indicators on the side of the cabin, as a position light. Extra wire is connected to position light.

Simple adapter, so that you can use the indicators on the side of the cabin, as a position light. The brightness will be dimmed compared to the indicator light. The indicator will work as usual with its high brightness, and it is still highly visible due to the difference in brightness.

Original connectors are used on the input and output, you simply connect it to the original wire harness and the lamp. The extra wire is connected directly to position light. This makes it very easy to mount.

The controller in the black box is potted and waterproof.
