Original Hi-do Turkish whistle horn

The original Turkish whistle horn from Hi-do. Gives a very high and well-known whistle. Choose between 12V and 24V.

The original Turkish whistle horn from Hi-do. It gives the very high frequent and well-known whistle measuring 125db. The horn is connected to the vehicle's air system. Available as 12V or 24V. It can be used on e.g. cars and vans or for trucks and buses.

The horn requires air between 6 and 8 bars, although the box indicates 6 to 10 bars. We recommend a pressure regulator to ensure a maximum of 8 bars. If more than 8 bars are applied, the whistle tends to get stuck. It's also a good idea to turn the horn downwards to prevent dirt from entering the whistle.

The air coupling requires a 6 mm hose.
