# Accessories for COB LED Light Strips

Cable connector, extension connector and flexible "corners" for our 10mm COB LED Light Strip

Can be installed without a soldering iron, but simply press the connector over the COB tape's copper points where there are cut marks.

The cable connection is fitted with a 15cm cable.

The Flex connector is mounted with a 14cm cable between each plug.

The mini connector makes it possible to collect 2 pieces of tape without appreciable distance between them.

!! Advise : Avoid making the COB strips longer than 3M at 12V and 5M at 24V to avoid a visible decrease in brightness.

The connectors measure 12x4mm, so it can be challenging to use these in certain aluminum rails.
