Adapter cable for position light in fog lights for Volvo FH 2021+

Adapter that is put in between the original connector and foglight. Turns on the foglight on low beam, when it is usually turned off.

Position light adapter that is put in between the original connector and the foglight on Volvo FH +2021. It makes it possible to turn on the foglight on low beam, when it is usually turned off, and in this way functions as addition position lights.

The fog light has two chambers, and both are lit up with low brightness white light (fog light and curve light). Both functions will work as usual, with the same standard brightness when activated.

Connection

The adapter is easily put in the harness, and the 5m red wire just needs to be connected to positionlight, optionally you can use a switch for manual activation.
