Interior lamp LED light source for MAN 2020+

Powerful LED emitter for TGS and TGX 2020's ceiling lamps, up to 4x brighter. Easy installation without changes.

Powerful LED light source that replaces the original light source in the interior ceiling lamps of TGS and TGX +2020.

The original light source has neutral white and red light for night time, but with low brightness. Our light source illuminates 3-4 times more powerful red and about 2 times more powerful neutral white light.

Our light source comes standard with neutral white and red light but can be manufactured in other colors upon request. Both colors can be switched.

TGX S-Lion 2023

Notice that there are two variants of this lamp. Some lamps are deper, and the emitter has a longer connector. The pins on this is 12mm from the backside, while the normal is 7mm.

Mounting

Installation is simple: the light source has the same plug pins and requires no changes in power or lamp. Remove the lamp, click out the original unit, and insert ours. Replacing the emitter only takes 2 minutes.
