

Prostroke Flash controller - 12V/24V

Compact Prostroke strobe controller with 26 flash patterns, easy installation, and synchronization.

A compact strobe controller from the Prostroke family that can be used for all types of independent lamps, such as marker lights.

The controller shares 26 flash patterns with Slim, Max, Corner, and Hideaways, and can also synchronize with them.

Connection

The strobe controller is fairly easy to connect, as shown below:

- White = Synchronization with other Prostroke devices
- Red = Plus warning light (12V-24V)
- Black = Minus / Ground
- Yellow = Flash pattern / program on minus.

The output of the controller has only a red and a black wire, corresponding to plus and minus.

Flash Pattern

When the yellow wire is pulsed to black (minus / ground) for less than 1 second, you switch between the 26 different flash patterns/programs.

With a pulse between 1-3 seconds, you switch to the previous flash pattern/program.

With a pulse of more than 5 seconds, the flash pattern/program is turned off.

When you reconnect the LED lamp to power, it will continue with the previously selected flash pattern/program.
