John Deere LED Lamp insert 48W, 10-30V

Powerful plug 'n' play light insert for John Deere with OEM fit. Replaces the roof and front light on a wide range of models.

This powerful light insert is designed as a direct replacement for original John Deere light inserts. It has the exact same dimensions and connection as the OEM parts and functions as a plug-and-play solution with no modification required.

The light fits directly into existing John Deere housings and is used as original equipment in the roof and front on a wide range of models.

Equipped with 8 high-performance Osram LEDs, the light delivers an impressive 5,286 raw lumens, providing up to five times more light than the original lamps. The color temperature is 6000K, and the 90-degree optics ensure wide and efficient light distribution.

The light features integrated thermal control that automatically reduces light output in the event of component overheating. This ensures an optimal balance between high light output and long service life. At maximum output, the light delivers 3,415 effective lumens and is reduced to 1,978 effective lumens at its lowest level.

The housing is manufactured from aluminum with an elegant black finish, and the front lens is made of polycarbonate with very high impact resistance.
