

Prostroke Slim Dual – Compact LED strobe, R65

Dual color LED warning lamps with an extra flat design, that can be mounted on cars, trucks and motorcycle. Bright light and many functions. ECE R65 approved.

Dual color LED warning lamps with an extra-flat and slim design, allowing them to fit in many different places. They can be connected to both 12V and 24V, making it possible to use the LED warning lamps on many types of vehicles such as cars, trucks, and motorcycles.

The LED lamps are made of aluminum, which makes them highly resistant to Nordic weather conditions. The LED lamps are currently available in the S6 model in several different color combinations, featuring a built-in total of 12 x 3W LEDs.

The LED lamps provide a powerful dual color strobe light, with the option to switch between a total of 19 different programs, which can be synchronized with other connected Prostroke LED lamps.

The LED lamps are ECE R65 approved and can therefore be legally used throughout Europe on public roads and motorways.

Additional information can be found under downloads, where the product datasheet can be downloaded. The datasheet provides more detailed information about the individual flash patterns and programs.

Please note that the datasheet is unfortunately only available in English. Make sure to refer to “Dual color strobe light instructions” — the first section refers to the single-color version.
