E-approved LED light-bar in our Black-series with a double LED line and a powerful combo-light, that is designed in a nice and slim black housing. With "hidden" LED's that gives an anonymous look and discreet look with the dark background.

The combo-light takes the best of a "spot-" and "flood" light bar. On each side, there are flood lenses and in the center, spot lenses. This way you have a good combination of the broad light spreading from the sides and the focused light in the center.

The LED lightbar is produced in an aluminum housing with a glossy black finish. The result is a light and slim design with optimal cooling for the LEDs. The front glass is polycarbonate, which has a very high tensile strength.

The light bar comes with a cable mounted to a waterproof connector.

18cm version has Deutsch DT connector

56cm version has ATP connector

Assembly:

The light bar is very easy to install with the included pins, washers, bolts and nuts. The legs are mounted at a suitable distance, after that the bolts are clamped into the side.

Black-series COMBO LED lightbar, E-approved
