21/5W Bay15D, LED Bulb, 24 x SMD, 10-30V, Xenon White

An extra powerful 21/5W Xenon White LED bulb with 24 pcs. 5050 SMD diodes, which together make 270 lumens.

An extra heavy BA15D/BAY15D Xenon White LED bulb with 24 pcs. 5050 SMD diodes, which together make 270 lumens. The LED bulb lens can work as run/position lights on, for example Peugeot and Mazda.

The LEDs bulb location lights up the whole dish. The bulb has a built-in voltage regulator that protects against overvoltage and therefore also provides a longer life.

The bulb is +-driven, so that it only works on vehicles, where the position/driving light is activated with a + wire. The bulb has a built-in voltage regulator, so that it works on 10 ~ 30 volt without the damage of charging voltage etc.

REF. no: 1157, 380, 12499, P21/5W, 12V, 24V

The diameter of the bulb is 20 mm. 50 mm long (measured from the pole to the diode peak).
