

Mini Driver for a High Power LEDs

An unprotected mini LED driver to provide a high power LED with the right amount of power.

An unprotected mini LED driver to provide a high power LED with the right amount of power.

Buy online at:

www.matronics.eu/130530

Selecting a driver is easy enough:

- A higher current (mA, mili-AMPS) gives more light. Do not exceed the maximum current for the diode!
- Do not exceed the number of diodes as indicated on the driver.

We recommend to supply these drivers with 12V DC from a transformer or directly from a car/mc wiring/battery.

320mA

SKU 130530

Max operating voltage:: 15Vdc

Max number of LED: 3 PCs

600mA

SKU 130532

Max operating voltage:: 15Vdc

Max number of LED: 1
