

Xenon White (50W) CREE LED 10-30V - PSX24W Canbus

A powerful PSX24W LED bulb that fits in to the original sockets. With 10 x 5W LEDs it is equivalent to 25W.

A powerful PSX24W LED bulb that fits in to the original sockets. The bulb has 10 CREE LEDs 5W LEDs, so a total of 50W. It is equivalent to a 25W incandescent bulb, so it is actually stronger than the original 24W bulb. The light-color is 6000K.

The special optics in the tip and on the sides give a great light in the lamp-reflector, and not least forward.

The 50W is the ratings of the LEDs, while the real consumption is about 4.5W.

The advantage with these bulbs is that there are no extra resistors to cheat the bulbs-controls, as the consumption all lies in the LEDs. With the high consumption you can avoid error-messages from the lamp-control in most newer cars. In some models it might be necessary to add some external resistors.

You can of course use these LED bulbs on older cars without canbus/lamp control.

Reference : PSX24W LED, 2504 LED, 12276 LED
