

HI 50W CREE LED IO-30V - Canbus

A powerful H1 bulb with 10 x 5W CREE LEDs. It fits directly in to the original H1 socket and it is equivalent to a 25W incandescent bulb.

A powerful H1 bulb with 10 x 5W CREE LEDs. The bulb fits directly in to the original H1 socket. The bulb is equivalent to a 40W incandescent and because of this you can only use it for DRL, as the original bulbs are 55W.

There are 2 LEDs on each side and 2 in the front. Together with the optics, the bulbs light up the whole reflector, as well as forward with a bright beam.

The 50W are the rating of the LEDs, and the real consumption is approx. 4.5W.

Because of the high consumption, the bulb can cheat canbus / lamp check in most cars, even without any built-in resistors. It might be necessary with external resistors in some cars.

You can of course use the bulbs in cars without canbus / lamp check.
