

An universal light-dimmer with a push-dim, 12-24V 12A

A smart dimmer that is controlled with a external button. A short press on the button for on/off and holding the button for dimming up and down.

A smart dimmer that is controlled with a button, which you connect to the controller. A short push on the button will turn the controller on or off and when you hold the button down, it will dim up and down.

There are screw terminals on both input and output, also for the button. You can connect any type of button, as long as it is a push-on / momentary.

It is also possible to use a 0-10V control of the dimming.

You can control multiple controllers by connecting the button / 0-10V to all controllers.
