

## Raw Aluminium Profile - Flat

Simple untreated flat aluminium-profiles that can be used for many purposes. 10, 20, 30 and 100mm wide.

Simple untreated flat aluminium-profiles that can be used for many purposes. The profiles are available in 4 different dimensions: 10 x 2mm, 20 x 2mm, 30 x 2mm og 100 x 2mm.

The lightbars are a good choice for cooling of LED stripes. They can be glued on or you can simply use screws. The alu-lightbars are especially useful if you need to mount the LED stripes on wood or other surfaces, where the tape on the stripes would not work. They can also be used for hanging the LED strips in free air.

For stripes that create a lot of heat, we recommend 30 x 2mm.

Note that these are untreated aluminium profiles, so the surface might be scratched and dirty. This means you will have to expect to polish them if they should be used visibly.
