230V to 24VDC dimmable transformers for installation

They are great for 24VDC stripe lights, which need to be controlled by 230V system.

They are used in installations, where there is a need for 24VDC. The transformers are designed primarily for LED conversions, as well as for creating new LED installations. They allow you to dim the light far down without it becoming unstable / flickering.

Please contact our support if you have a light setup you want to dim, so we can provide you with support.

The transformer must NOT be combined with 24Vdc dimmers.
If in doubt, contact support, we are happy to answer your questions.

1.250mA - 30W
SKU 500075
Dimensions: 24 x 133 x 46mm

2.500mA - 60W
SKU 500076
Dimensions: 29 x 170 x 50mm

3.125mA - 75W
SKU 504260
Dimensions: 30 x 170 x 56mm

4.100mA - 100W
SKU 500078
Dimensions: 40 x 121,2 x 68mm

4.100mA - 100W
SKU 504261
Dimensions: 30 x 200 x 63mm

6.250mA - 150W
SKU 504262
Dimensions: 30 x 193 x 63mm
