

Serie 30 - Corner joint

Smart and solid joint for screwing 2 or 3 profiles together in a corner. Covers for holes included.

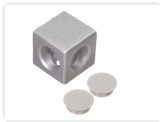

Smart and solid joint for screwing 2 or 3 profiles together in a corner. You cut threads in the ends of the profiles, where after you bolt these together from the inside of the bracket. Small taps go in to the profile, so that they cannot be teared loose. This gives you a very sturdy and durable joint, that has a high degree of stiffness.

Covers for the holes is included, which gives you a great finish.

The joints have the same dimensions as the profile and fits the system perfectly.
