Matronics RGB + White lightbar for 12V

Complete LED bar with RGB+White light. Gives a great bright light, with wide and soft beam. Profile up to 3 meters, with 3 meter wire and clips.

Complete LED bar with a powerful RGB+White strip, that with the right controller, can change in all kinds of colours.

The annodized profile and the plastic encaps are high quality which gives the assembled profile a nice and neutral finish. The clips are hidden inside the profile, which makes the finish perfect. The matte front mixes the colors, increases the light beam and removes the blinding effect from the LED strip.

The bar gives a nice bright light, and by connecting it to a color controller, you can make the light bar create thousands of colors, warm white or a combination of these.

The bar can be used anywhere, as long as it is not exposed to moisture and water. It can be connected directly to 12V in a car or trailer, or at home with a 230V transformator.

It is available in lengths up to 2 meter, and with 3 meter wire and clips. The clips are screwed on, where after the profile is clicked on them.

2 clips are included for 50cm and 100cm profiles, 4 clips for 150cm and 200cm profiles.

Connecting

It is important that the lightbar is correctly connected, or you will get incorrect colors with a color controller. It is also very important that both brown and pink are connected to Plus. Incorrect wiring will not ruin the lightbar.

- Brown and pink = Plus
- White wire = Red color
- Green wire = Green color
- Yellow wire = Blue color
- Gray wire = White color
