Matronics SMD Flexbox, marker lights

Very compact lamp for marking light and license plate. Angle or straight model, very easy to mount.

Very compact lamp, that can be used for marking light and license plate. It is available in two different models - an angle model that lights to the side of the mounting surface, and a straight model. Both models are available in Black, Chrome and White plastic.

Produced by Matronics in Denmark. It can be customized for larger quantities.

Dual Color

Color-change happens by swapping plus and minus. The lamp has 2 wires, that shows which color is activated when this is connected to plus - the other is connected to minus. You can then change color by swapping plus and minus, either manually, with relay or a controller, see below for these. You can also decide just to let it be lit by a single color.

Controllers for Dual Color

Matronics Dual Color - US light controller

Matronics Dual Color - Color changer (polarity flipper)
